OUTCOME CODES FOR MACS STATUS FORM

CODE CONDITION

CDC-DEFINED AIDS DIAGNOSES (Section C)

01 Kaposi's sarcoma
02 Pneumocystis carinii pneumonia
03 Toxoplasmosis (at a site other than or in addition to liver, spleen, muscle or lymph nodes)
04 Cryptosporidiosis with diarrhea persisting > 1 month
05 Isosporiasis with diarrhea persisting > 1 month
06 Histoplasmosis, disseminated, at a site other than or in addition to lungs or cervical or hilar lymph nodes
07 Cytomegalovirus infection histopathologically documented (of an organ other than liver, spleen, or lymph nodes) or diagnosis by serology culture alone. If CMV retinitis or CMV polyradiculitis, code as indicated below, 08 or 27, respectively.
08 CMV Retinitis, eye unknown
28 CMV Retinitis, left eye
29 CMV Retinitis, right eye
27 CMV polyradiculitis. Usually developing in a patient with advanced immune deficiency who has evidence of CMV infection elsewhere, eg, CMV retinitis, colitis, with the subacute onset of lower extremity weakness, sacral/back pain, sphincter disturbance. Cerebrospinal fluid analyses usually show a marked inflammatory response with elevated WBC, total protein, and in 50%, positive CMV culture. Autopsy confirmation may be present with demonstration of CMV in the lumbosacral nerve roots.
09 Primary Lymphoma of brain

**CODE CONDITION**

**CDC-DEFINED AIDS DIAGNOSES** (cont)

22 Cryptococcal infection extrapulmonary - blood

23 Chronic mucocutaneous herpes simplex infection persisting > 1 month; or herpes simplex bronchitis, pneumonitis, or esophagitis

24 Coccidioidomycosis disseminated (at a site other than or in addition to lungs or cervical or hilar lymph nodes)

25 Salmonella (non-typhoid) septicemia, recurrent

26 Wasting Syndrome: findings of profound involuntary weight loss > 10% of baseline body weight plus either chronic diarrhea (at least two loose stools per day for > 30 days) or chronic weakness and documented fever (for > 30 days, intermittent or constant) in the absence of a concurrent illness or condition other than HIV infection that could explain the findings (e.g., cancer, tuberculosis, cryptosporidiosis, or other specific enteritis.)

*******************************************************************************

**CODE CONDITION** added January 1, 1993

50 Pulmonary Tuberculosis or mycobacterial TB in the lung.

51 Recurrent pneumonia (more than one episode in a 1-year period), acute (new x-ray evidence not present earlier) pneumonia diagnosed by both: a) culture (or other organism-specific diagnostic method) obtained from a clinically reliable specimen of a pathogen that typically causes pneumonia (other than *Pneumocystis carinii* or *Mycobacterium tuberculosis*), and b) radiologic evidence of pneumonia; cases that do not have laboratory confirmation of a causative organism for one of the episodes of pneumonia will be considered to be presumptively diagnosed. Recurrent pneumonia diagnostic date is the date that the 2nd episode is diagnosed.
DISEASES/CONDITIONS OTHER THAN CDC-DEFINED AIDS - NEUROLOGICAL

(Section D.1)

CODE CONDITION

HIV-RELATED PERIPHERAL NEUROPATHIES

3-100 Cranial neuropathies. Development of single/multiple cranial neuropathies thought to be related primarily to HIV infection. Other conditions, eg. cryptococcal meningitis, lymphomatous meningitis excluded.

3-101 Painful sensory neuropathy. Painful paresthesias and/or dysesthesias with symptoms of pain, burning, tingling in the lower extremities with signs of peripheral neuropathy (contact hypersensitivity, reduced vibration sensitivity, decreased or absent ankle reflexes). No exposure to toxins, including chemotherapy, ddI, ddC. No history of diabetes mellitus or alcohol abuse.

3-102 Inflammatory demyelinating neuropathy. Acute or subacute development of motor weakness with hypo/areflexia and variable sensory deficit. NCV's demonstrating marked slowing of conduction velocities and/or denervation. Nerve biopsy indicating inflammation and demyelination.

3-103 Mononeuritis multiplex. Multifocal signs and symptoms in the distribution of 2 or more named peripheral nerves.

3-105 Other HIV neuropathies (not otherwise specified). Includes all other neuropathies that might be a consequence directly or indirectly of HIV infection.

OTHER NEUROPATHIES (NON-HIV RELATED)

1-110 Cranial neuropathies. The development of cranial neuropathies considered not to be a consequence of HIV infection. These might include development of progressive hearing loss or optic neuritis.

1-111 Entrapment neuropathies. These include the development of traumatic neuropathies affecting a named peripheral nerve with numbness, weakness, and/or pain in the distribution of the nerve, eg, carpal tunnel, tarsal tunnel, cubital tunnel.
CODE CONDITION

OTHER NEUROPATHIES (NON-HIV RELATED) (cont)

1-112 Toxic neuropathies. These include the development of neuropathies (which are usually painful or sensory neuropathies) related to toxic effects of drugs, eg, vincristine used in the treatment of KS, or dideoxycytodine (ddC) or dideoxyinosine (ddI). Toxic neuropathies can also develop with excessive doses of vitamin B6 (pyridoxine).

1-114 Other neuropathies, not otherwise specified. These might include neuropathies related to syphilis, nutritional deficiencies, alcoholism.

MYELOPATHIES

3-120 Vacuolar myelopathy. Acquired abnormalities in lower extremities out of proportion to upper extremity abnormalities. Symptoms of leg weakness, incoordination, and/or urinary incontinence with signs of paraparesis/plegia, spasticity, hyperflexia, and/or Babinski signs. HIV encephalopathy/dementia often coexists. Where appropriate, imaging studies of the spinal cord (myelography, spinal MRI, spinal CT) to rule out compressive or intrinsic lesions.

3-121 Infectious causes of myelopathy. Tuberculosis of the spine, epidural bacterial/fungal abscesses, and herpes group infections of the spine.

1-122 Metabolic/nutritional causes. Example: Vitamin B12 or vitamin E deficiency.

1-123 Other myelopathies, not otherwise specified. For example, patients with cervical spondylosis, degeneration of the spine with compressive myelopathies.
**CODE CONDITION**

**MYOPATHIES**

1-131 Toxic myopathy. Clinically indistinguishable from HIV-1 related polymyositis. The development of weakness, principally in proximal muscle groups with myalgias and elevated CPK after prolonged zidovudine therapy (usually several months). Response in myalgias, CPK, and/or weakness to zidovudine reduction or discontinuation.

1-132 Other myopathies, not otherwise specified. These might include muscular dystrophy, severe muscle wasting from nutritional deficiency.

**OTHER NEUROLOGICAL DISEASES**

1-140 Neurosyphilis. This would include a past or current history of treatment for neurosyphilis, either asymptomatic neurosyphilis (usually diagnosed if a lumbar puncture is done and the CSF VDRL is positive) or symptomatic neurosyphilis. Treatment of neurosyphilis typically includes

a. high doses of intravenous penicillin given during a 10 to 14 day hospital day or

b. daily doses of procaine penicillin with probenecid given for 10 to 14 days.

3-141 HIV aseptic meningitis. Development of fever, headache, neck stiffness, cranial neuropathies and mental confusion of encephalopathy. Usually associated with seroconversion illness in an otherwise well individual.

3-142 Possible HIV encephalopathy/dementia: insufficient data. Case with cognitive or behavioral manifestations reviewed as "possible" by local NP group or NPWG (specify which), but with insufficient clinical or laboratory information. Where insufficient clinical information is present, but autopsy shows no opportunistic processes and has features of HIV encephalitis with microglial nodules, myelin pallor, multinucleated giant cells, use this code and indicate in section D2 (=necropsy).
3-143  Possible HIV encephalopathy/dementia: confounding conditions. Case with cognitive or behavioral manifestations reviewed as "possible" by local NP group or NPWG (specify which), but with other confounding conditions or disorders, eg, metabolic disturbance, hypoxia, psychiatric disorders, vitamin deficiencies, neurosyphilis.

3-144  Herpes zoster meningitis
CODE   CONDITION

OTHER NEUROLOGICAL DISEASES (cont)

1-199  Non HIV-related neurologic disease. (NOS/ cannot determine specific diagnosis)

3-199  HIV-related or unknown neurologic disease. (NOS/ cannot determine specific diagnosis)
